This chapter reviews the current state of knowledge on injury biomechanics and presents recommendations to advance the field by forming university centers for research, by training engineers and scientists in injury biomechanics, and by . It provides a basic understanding of the biomechanics of the injuries resulting from the impact to the head, neck, chest, abdomen, spine, pelvis and the lower extremities, including the foot and ankle. Other topics include side impact, car-pedestrian impact, effectiveness of automotive restraint systems and sports-related bongodogdesigns.com: 1. Injury in America traces findings on the epidemiology of injuries, prevention of injuries, injury biomechanics and the prevention of impact injury, treatment, rehabilitation, and administration of . It provides a basic understanding of the biomechanics of the injuries resulting from the impact to the head, neck, chest, abdomen, spine, pelvis and the lower extremities, including the foot and ankle. Other topics include side impact, car-pedestrian impact, effectiveness of automotive restraint systems and sports-related injuries. Injury/Impact Biomechanics Research in Impact Biomechanics uses laboratory experiments with human surrogates and volunteers to study the mechanical response of the human body to dynamic loading and to study the mechanisms and tolerances of the different body regions to injury.
